

Diary(2.1) ^{3/7}

Version 2

^{3/7}

Structure

Kevin Shown: Robot drum (front part) construction, complete the support and motor gear transmission structure. Check whether the chassis tire can rotate freely and adjust the tightness of the gasket

Kevin Shown: Roller model initial trail, personal opinion, compared with the suction model, absorb the efficiency and fault tolerance rate of Triballs has obvious advantages; and the fuselage is lighter, the center of gravity is lower, more flexible and stable. The disadvantage is the poor processing ability of Triball in the corner; Due to the structural particularity, when the opponents are Double-Zoned, it can not deal with the scoring triballs in its own Goal

(it can not raise the Goal and reach into the roller to Suck out the Triballs)
