

Beijing World Robot Competition WRC Summary

During the competition, we overcame all difficulties and enter the final as the runner-up. Finally, we won the runner-up. After the competition, we fully reviewed the video and made an analysis.

PART 1 Operation strategy

A. Qualification

Because of the randomly assigned, the standard of each teammates is not average, which leads a big gap in the tactics. Therefore, we realized it important to occupy the major importing position. We push the triball in the side channal in the last 30 sec. to ensure the lowest score. In addition, we should also cooperate with our teammates, changing the way of Elevating.

At the same time, we need to judge the way of handling the Triball. For example, we can push the Triball (threw to our zone by the opponent) to the edge area or pick up it twice and put back into the opponent's defensive zone.
