BRAIN STORM

After the championships in the East China division, we had a meeting to analyse What Can Be Improved?

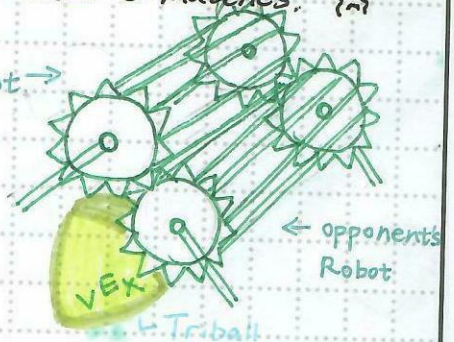

Intake

In our version 3, we use a Green motor to drive a set a of gears. However, in the fierce confrontation, the problem emerged — when our Robot's intake part get hit, the link is easy can be broken off easily. We met this situation 4 times in the total 8 matches.

Martin —

The other problem is that, our intake device is higher than others. The result is that our triball (in the intake) can be taken by others.
