

Version 4.

30/10 Diary 4.1 Structure - Intake

To the 2 problems we mentioned, we began to rebuild the intake part

A. The link can be broken off easily and the intake will lose ~~passion~~ the power to actuate.

According to the rules, in this season, we can use V5 smart Motors (5.5W) (276-4842) as long as the combined power of all motors must exceed 88 W. So it is allowed to change the Green motor to 2 Green smart motors since the intake device do not need a strong force. In this way, we can add a set of gears so that the intake device will be much more stable.
